

Kubota

KUBOTA TIGHT TAIL SWING UTILITY CLASS EXCAVATOR

KX

KX080-3

The 8-Tonne Utility Class Excavator that's Perfect for Your Needs.

*This information is sourced from overseas and may not necessarily apply locally. It is essential that you confirm specifications and other information with your local Kubota dealer.

A Kubota KX080-3 compact excavator is shown in a construction setting. The excavator is orange and black, with "KUBOTA" and "KX080-3" visible on its side. It is positioned on a dirt surface, with its arm and bucket raised. In the background, there are several buildings under construction, featuring wooden framing and sheetrock walls. A ladder is visible on one of the buildings. The sky is clear and blue.

Kubota unearths its largest, most advanced Utility Class excavator. Achieve industrial performance in urban environments.

Kubota, the world's compact excavator leader, introduces the ideal solution for jobsites requiring extra performance in tight quarters. The KX080-3, Kubota's first 8-tonne excavator, is everything Kubota customers expect, and much more. The Kubota DI engine powers the 3-pump load-sensing hydraulic system through the hardest, heaviest work with industrial digging forces. You can work in the comfort of a safety-certified, air-conditioned cab. Plus, fuel-saving, adjustable auxiliary flow rates and auto-idle help you control operating expenses. You get all of this, and more, only from Kubota.

KUBOTA TIGHT TAIL SWING UTILITY CLASS EXCAVATOR

KX080-3

The power and technology to tackle almost anything.

WORKING PERFORMANCE

The KX080-3 isn't just one of the most powerful utility class excavators around, it's also one of the most versatile. With a 66.5-horsepower engine and more than 6,650 kgf of bucket breakout force, this excavator proves it has the strength to work as hard as you do. Moreover, its one-touch oil flow control gives it amazing versatility. Add to these, a host of high-performance standard features including auxiliary circuit 1 & 2 service ports and our Auto-idling system, and you have an excavator that's ready for anything.

Economical Kubota DI Engine

A 66.5-horsepower Kubota diesel engine provides the energy behind the powerful KX080-3 working performance. The 3,769 cc direct injected engine contributes to easy starting on those cold mornings, low sound levels, and energy saving fuel economy.

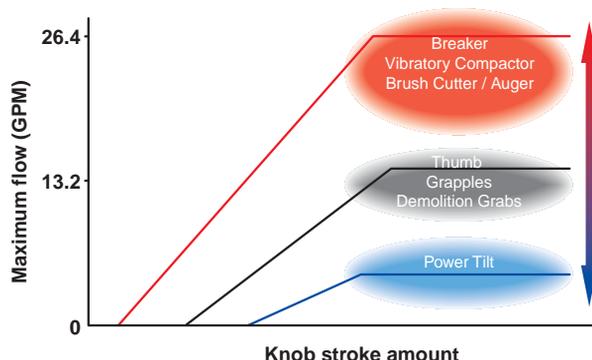

Adjustable Maximum Oil Flow Control for Auxiliary Port

This unique function lets you control the oil flow according to your needs or the attachment in use. It eliminates the hassle of using tools to change settings manually, so you don't have to leave the cabin. When using a tilt bucket, you can slow the flow to get just the right control to gently shape a swale. Alternatively, for a brush cutter, direct the oil flow to one side of the excavator arm. The system will even store your settings for the next time you need it, saving time and quickly regulating the flow requirements. Adjustable oil flow enhances performance and saves fuel.

Flow Volume Requirements

Industrial Digging Force

You need exceptional power when trenching through compacted soil. With the KX080-3, elevated productivity levels are certain with the combination of 6,650 kgf. bucket force and 3,880 kgf arm forces. The KX080-3 powers through those demanding applications so that you can quickly move on to the next job.

3-pump Load-Sensing Hydraulic System

Kubota's load-sensing hydraulic system guarantees smoother handling, regardless of load size. It allows hydraulic oil to flow according to your precise needs. The KX080-3's new 3-pump load-sensing system also allows you to perform simultaneous operations, such as dozing and utilising front attachments, without losing speed.

Auto Idling System

Save fuel with Kubota's Auto Idle. Reduce engine RPM instinctively when high engine speed isn't needed. When the control levers are in neutral for more than 4 seconds, the engine RPM automatically idles. Move any control lever and the engine RPM immediately returns. This innovative feature reduces noise and exhaust emissions while reducing operating costs.

Stability and Working Range

The KX080-3 design combines smooth, harmonised, hydraulic system performance with optimum balance in a tight tail swing excavator for versatile stability. Together with extended dumping height, a swing boom, large bucket capacity and deep digging depth, the KX080-3 can match or exceed the latest high-capacity dumper, tipper, and construction site requirements.

Tight Tail Swing

The KX080-3 is designed with a shorter rear overhang. Thanks to this contoured, tight tail design, the KX080-3 is more stable, can handle a wider range of loads, and can work in more restrictive spaces than traditional tail swing excavators.

360 mm

The tight tail swing of the KX080-3 maximises machine balance and increases versatility.

Auto-Shift

Now your excavator moves how you want it to—even at high speeds. When working with heavy loads, making turns or backfilling trenches, the system automatically downshifts for more torque. This shift is so smooth and seamless you'll feel as though you've never left high speed.

Dozer Blade

With the high-capacity dozer blade, you don't need separate machines for site prep, digging, and finish work. Save money, time, and personnel!

Make hard work seem easier with our ergonomic, user-centred cab.

OPERATOR COMFORT

For enhanced operator comfort, Kubota has improved the design, look and feel of the operator cabin. The larger windows offer improved visibility and the lower portion of the front window can be easily removed and stored behind the seat. You can also include the sound system of your choice in the cabin, which now includes two speakers, an aerial and a harness. The cabin is also equipped with storage space behind the operator seat, a coat hook, lunch box and a handy cup holder. You've got everything you need, right there.

Easy-open Front Window

Unlike many excavator windows, the front glass window of the KX080-3 opens with ease. Just flip the latch on the side of the window and slide it up. A gas-assist mechanism makes this action almost effortless.

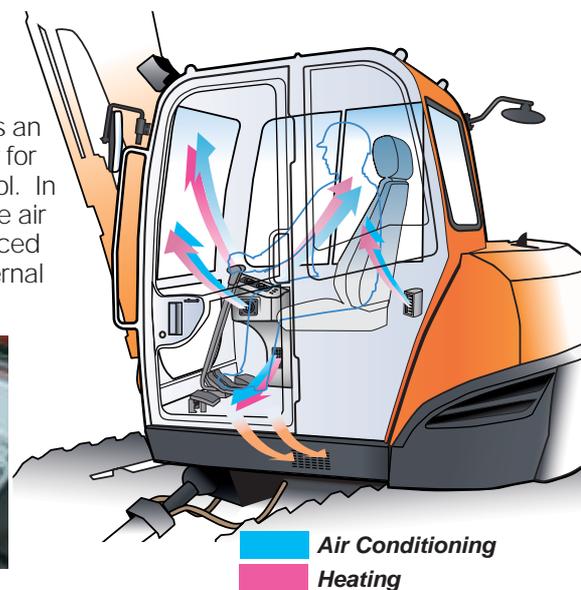

Window Guard

Operators need protection from flying chips and debris when using some attachments. On some sites, anti-vandalism is important. Kubota provides the window guard mounting points around the front window as a standard feature.

Air Conditioner

The KX080-3 features an air conditioner/heater for greater climate control. In addition, fresh outside air can be easily introduced by activating the external air vent.

Rear View Mirrors

The three mirrors offer a wide range of visibility so you can have a better view of your worksite, as well as your immediate surroundings, to do your job safely and accurately.

Digital Panel

Informative, interactive and functional, Kubota's Intelligent Control System LCD panel accurately displays timely diagnostic readings and routine maintenance alerts. You'll be kept informed of your current working conditions, engine RPM, temperature and oil levels. It even emits an alert when the tank is nearly full during refuelling. These new features help reduce downtime and costly repair fees.

Deluxe Suspension Seat

Designed and engineered with comfort in mind, Kubota's high-back suspension seat reduces strain and minimises operator fatigue. It reclines to accommodate your individual posture, and offers weight compensation, firm wrist support and retractable seat belts.

Cup Holder

Digging can be thirsty work, and with the convenient cup holder, you can work and still quench your thirst without leaving the cabin.

TPSS

The Two-Pattern Selection System can shift control styles, whether it's the ISO pattern or the SAE backhoe pattern, with the simple turn of a switch.

Designed for dependability, built to last.

DURABILITY & MAINTENANCE

The KX080-3 offers best-in-class durability, performance and efficiency. Stronger, more stable, and with a heavier load capacity than other excavators in its class, it's ideally suited for the most demanding excavating jobs. And thanks to its breakthrough bonnet design and layout, it's easier than ever to access Kubota's advanced components for routine maintenance—you have a clear, unfettered view of the excavator's inside workings.

Triple Opening Bonnet

All three of the excavator's access panels can open at once. This allows you to easily inspect and view the centrally located components of the KX080-3. You can easily access the hydraulic components under the centre hood, or the battery, oil filter and tool box under the right hood. Maintaining your excavator has never been this easy.

Electric Fuel Refilling Pump

The KX080-3's new, standard refuelling pump includes a hose long enough to refuel from a fuel tank. With this pump, the tank can be completely filled in approximately three minutes with just a simple push of a button. Upon completion, an auto-stop feature ends fuelling to eliminate spillage.

Two-Piece Hose Design

Kubota's innovative two-piece hose design for the dozer blade reduces hose replacement time by nearly 60% compared to non-joint types. This design virtually eliminates the need to enter the machine for maintenance.

Steel Crawler (Optional)

A rugged steel crawler is an excellent option when using your KX080-3 on worksites that may compromise the durability or integrity of the standard rubber crawler.

*450 mm steel crawler

SAFETY

When Kubota designs and builds an excavator, safety is a primary concern. The KX080-3 includes several features specifically designed to maximise worker, site, and machine safety.

ROPS/FOPS Cabin

The ROPS/FOPS certified cabin provides protection in the event of accidental rollovers and falling objects.

Movable Console

Raise the safety control lever and the console moves with it, providing more room for entry and exit. To prevent unexpected machine movement during entry or exit, all control levers are then disabled until the console is back in place.

Boom Anti-Drop Valve

Standard equipment on the KX080-3, the anti-drop valve prevents an elevated load from dropping unexpectedly.

Overload Alarm

To better ensure worker safety and equipment condition, the KX080-3 comes equipped with an overload alarm. This alarm alerts the operator when load capacity has been exceeded, helping to prevent possible injury to workers and costly damage to the excavator and worksite.

Swivel Negative Brake

The swivel negative brake automatically locks the swivel function in its current position. This prevents unexpected machine movement. It's particularly useful during work or when transporting the excavator between worksites.

The possibilities are nearly endless with a full range of implements.

Implements are the key to getting the most out of your excavator. Use the ones listed below to greatly expand your machine's capabilities. The Kubota KX080-3's large auxiliary oil flow allows you to attach a wide range of excavator implements. Talk to your local Kubota dealer to ensure your new KX080-3 is customised to your requirements.
